

DEFINITION OF GEE

GEE is an abbreviation for Global Electric Effect, which was first used by the TIIT Technology Institute in the formulation of the Law of PPP, and reads as follows:

GEE is a physical manifestation of planetary extremes of electromagnetic fields (EM), naturally occurring in the Universe, both at the micro and macro level, in cycles and intensity appropriate to the scale, inducing one another in direct contact. GEE is a manifestation of the *Element* ♡ of PRAVDA.

In the Solar System, GEE is an electromagnetic interaction of the Sun and the Earth at the time of intensified action of the Sun's EM field, occurring at times of the EM field's extremes generated by the center of our Galaxy. In this period, wandering EM waves induce all local EM field of celestial bodies in their way, and their potential considerably changes the entire physics of these bodies during the transition.

GEE phenomenon is common, and as indicated in the ancient messages, in which they are called 'Ends of the World', they are an unimaginable trauma to the planetary biosphere on a global scale, each time bringing highly developed civilisations on Earth to the collapse, and in the extreme cases, to a total destruction of the entire biosphere and the environment.

GEEs occur in a wide range of varieties, and their cyclicity is a regular on a cosmic scale. On Earth, they are the periods covering approx. several thousand years, but we still do not know all the rules governing them.

Science is conducting intensive observations of the Sun, heliosphere and the center of Galaxy, and with the augmentation of this database, more accurate predictions will be possible of the GEE's occurrence and the character of their categories. The race against time is on, however, it is not yet a foregone conclusion, as to how our civilisation shall rank in it, while its state of conscience of PRAVDA is still unsatisfactory, for reasons explained in detail here.

GEE applies not only to the Earth and other planets, but defines the whole physical phenomena occurring as a result of electromagnetism generated by celestial bodies in the immediate vicinity in space everywhere in the Universe. Closer examination of the Sun allows the conclusion that, like all stars, it is a highly electrically charged celestial body. Recent scientific reports confirm that our star is not a gas cloud, but

a planet that has a thin crust consisting of mainly iron in the semi-molten state, surrounding a small nucleus, which is at the same time its local channel, where the original cosmic energy flows from the sub-optical dimension.

The same is true for the Earth, which is a strong electromagnet, so the natural result of the cosmic proximity of the Earth and the Sun is cyclical GEE occurrence between them, manifested as sudden electrical discharges of cosmic proportions. Humanity perceives them as global cataclysms, the infamous 'ends of the world', every few thousand years ruining all existence on Earth, occurring on planets in the entire Solar System.

From the galactic perspective, GEE is a result of cyclical flows of currents emitted by our Galaxy's center, which is described with great precision by the Zodiac signs, which are also fragment of [PRAVDA](#), literally meaning the Heavenly Knowledge, left to us by [Pol Lelis](#) the giants aka *Palyaki*, the Heavenly Ones, our stellar ancestors. After the last fiery GEE that occurred approx. 13,750 years ago, as reported by the Hellenes, 490,000 of these Beings died a violent death in the Atlantis, today's Central America. Earth's biosphere was almost completely destroyed and the Giant Night fell for 90 years, commemorated till this day in many cultures as the festivity ^{([link15](#))} of the same name.

Human civilisation recovered from this fall only after several thousand years thanks to [Easter](#), the respectable member of the [Pol Lelis](#)' family. Science predicts that the next GEE will visit the Earth within a few hundred to a thousand years, which is why it is so crucial for [PRAVDA](#) to be disseminated as broadly as possible, using all media available to us.

When Darwin proposed his theory of evolution in the 19th century, the world set only the first steps outside the cradle of idealism. Today we already know so much more about biotechnology and life that Darwin's idea about life, his theory of the evolution of species, despite the continuous promotion in the mainstream media, is already a history. The theory of evolution includes a general flaw, as a result of using the [infomiated](#) information and is not relevant to contemporary knowledge about the world.

TIIT proposes to fill the vacuum after Darwin's outdated concept with a new universal idea in the field of life, the **Primary Prerequisite of Periodicity**, or [PPP](#), which was known to humanity in various forms since time immemorial.

The above defined GEE is a natural physical phenomenon in the Universe, simply a kind of an electrical storm that we observe on Earth, only of a much larger, cosmic proportion. GEE is a wave phenomenon, occurs cyclically since the birth of each galaxy, in many frequencies, intensities, magnitudes and other parameters typical of waves. In cosmic history it is the primary direct cause of global climate change and environmental impacts, affecting the entire biosphere, putting life on all planets in direct dependence on their runs.

It should be noted that GEEs occur independently of other astronomical phenomena, such as eg. a regular occurrence of ‘Ice Ages’, or collisions with celestial bodies, eg. the impact of meteorites, or planets’ passing through interstellar dust clouds which are random events. Scenarios of GEE waveforms and their scale may vary considerably, from small and gentler to large and very violent, but they are always total and disastrous for the planetary biosphere, and for all intelligent life forms that reside there they are a deeply traumatic event, because usually end the world as they have known and those who luckily survived, if any at all, are like that, are then forced to rebuild their civilisations practically from scratch. It is not always possible, because it happens that nobody competent survived, especially in the case of eg. burning the atmosphere or simultaneous activating of all the volcanoes, which even in our Solar System is not an exception.

Due to the prevalence of GEEs, the law of [PPP](#) is valid in any location of each galaxy, covers all the planets, and information about them is possessed by all beings of a higher intelligence, who due to this existential threat organise themselves into not numerable stellar tribes, with a high degree of organisation though. In particular, they remember that the Universe is not a stable environment conducive to the development of civilisation and life in general, and the planets are not a safe place suitable for a peaceful biological existence in the long run. The tribes of beings with superior intelligence, not necessarily humanoid !, usually hold many colonies on planets, arranged so that they can always move away from the planet attacked by GEE on to a planet with already stable climate and environment.

Although specific scenarios of GEE runs are very difficult to predict even for the most informatically advanced, it is generally possible to identify their symptoms in time, the more accurately the more time has passed since the last such event. [Pol Lelis](#)’ teach that GEEs on Earth occur in two general varieties: the so-called ‘fiery’ and ‘watery’ ones. The former one, as the name suggests, is more traumatic, but happens at longer intervals, once every one hundred thousand years, while the latter one is mainly characterised by extensive floods of global reach. This is more common and occurs with high regularity every few thousand years. GEEs take place in accordance with the rhythms and other physical parameters of matter waves emitted by the centers of galaxies. Cycles of these waves in the solar system are not longer than several thousand years, and certainly the same is true for the planetary systems throughout the Galaxy, because all are strictly dependent on the works of its center. From our stellar ancestors the *Giant Palyaki*, we know that one cannot plan existence of a civilisation on Earth for longer than 5,000 years, as well as must be prepared for any eventuality, for example, for an expedition of the

species and the biosphere beyond the Earth for the duration of this extreme event, because it may turn out that it is the only gene pool, from which the species could be restored and organise again a harmonious reconstruction of the biosphere completely destroyed after passing the GEE.

The most competent and at the same time the oldest source of information on PPP is PRAVDA, or the Heavenly Knowledge that founders of our civilisation, and at the same time ancestors of humanity, gave us - Pol Leli the giants. They were apologists of the so called Vedic concept of the world, ie. based on PRAVDA, and especially warned humanity against the effects of the GEE, which, unlike ordinary people, they knew well from personal experience as the so-called 'Ends of the World'.

Physics of this phenomenon in our dimension explains the model of multiple range electromagnetic radiation. Such radiation directly affects the work of all electromagnetic fields in its vicinity, and indirectly to the entire physics of planets encountered along the way (stars are also planets, only of exothermic nature). In the Solar System, these waves occur during periods of no more than 5,000 years.

The last GEE on Earth took place in 2348 BC and manifested as extensive floodings, following 40 days of extremely intense rain and storms, accompanied by volcanic eruptions and earthquakes, with a number of negative effects on the human population, which suffered huge losses, like all the biosphere. Also during this time, a powerful flow of electricity from space to the surface of Venus was seen, in the form of a lightning, which ignited and burnt this planet's entire atmosphere. It was visible from Earth as a torch burning for several days. To date, Venus extend fumes from the fire, and the surface temperature has not dropped below 500 degrees since. Similarly, in the distant past, the GEEs carved out the Grand Canyon on Earth, Valles Marineris, or the famous " Channels" on Mars, the characteristic "dendrite rivers" and in excess of 99% of the craters on the Moon and other planets in the observable Universe.

PPP is valid in the whole universe known to us, and GEEs are the most important physical factor among all those involved in the process of shaping the characteristics of life, starting from its cyclical nature of the physical forms. After each GEE there are mutations in the DNA, which can manifest even in a violent change on cosmic scale of biological characteristics of species and the overall character of a planet's biosphere.

It will still take some time before the necessary data are collected to present a complete theory of the PPP, however TIIT Institute on its website will present subsequent updates from routine scans of information, performed within its program of desinfomation.
